REPAIRO B2B SAAS EXECUTIVE MEMO

Investor Briefing & Market Validation

1. EXECUTIVE SUMMARY

Repairo is an automated API dependency maintenance engine. When third-party API vendors (OpenAI, Gemini, Stripe, Supabase) publish breaking changes, Repairo automatically detects the breaking contract changes, maps the impact across client repositories using Abstract Syntax Trees (AST), and opens safe, verified GitHub Pull Requests with code fixes. All code is processed in an ephemeral, volatile RAM buffer with zero disk persistence to meet enterprise compliance standards (24ms purge cycle).

2. API DRIFT MARKET VALIDATION (METRICS)

- **14.78% Break Rate:** Academic analysis of 9,000+ software releases confirms that 14.78% of all API updates introduce breaking changes.
- **Widespread Impact:** 62.46% of standard developer libraries contain at least one breaking change, causing up to 40% of microservice integration failures in production.
- **GenAI Velocity:** The emergence of LLM APIs has accelerated breaking change frequencies. Gemini and OpenAI changelogs show continuous breaking updates (model deprecations, field renames like `total_reasoning_tokens` to `total_thought_tokens`) requiring manual code refactoring.

3. COMPETITIVE LANDSCAPE

Company	Core Focus	Automated PR Fixes	Status
Optic	OpenAPI linting & contract testing	No	VC Backed
Bump.sh	API docs & changelogs	No	VC Backed
Speakeasy	Code-generating SDKs	No	Venture Backed
Dependabot	Vulnerability/version updates	Not API-aware	GitHub Owned
Repairo	Drift Detection + AST Mapping + Auto-PRs	**Yes**	**Sarvam Backed**

4. DELAWARE INCORPORATION ROADMAP

- **Structure:** Delaware C-Corp via Stripe Atlas / Clerky.
- **Protection:** Founder and team equity bound to standard YC vesting (4-year vesting, 1-year cliff) with formal IP assignment (PIIA).
- **Compliance:** Zero-retention memory vault to support SOC2 Type I compliance audit in Year 1.

5. TWO-YEAR EXECUTION ROADMAP

Year 1: Validation & Angel SAFE

- Q1: Private Beta with 5-10 design partners. Delaware C-Corp setup. Close $100k SAFE note at $2.5M cap.
- Q2: Public Beta launch. Team performance stipends distributed.
- Q3: Scale to 50+ active dev teams. Establish physical engineering hub in Bangalore.
- Q4: Onboard first 5 paid enterprise customers ($500/mo).

Year 2: Venture Scale

- Q5: Raise $1.5M Venture Seed Round. Transition founding team to full-time market salaries ($4,000/mo).
- Q6: Expand AST engine to support Go, Python, and Java repositories.
- Q7 & Q8: Scale to 100+ enterprise clients, targeting mid-market scale-ups.
