

Strategic Response & Roadmap for Sanjay

1. MARKET METRICS: API CHANGE FREQUENCY

To address the core question regarding how often API specs/endpoints change in production:

- **14.78% Breaking Changes:** Academic studies analyzing over 9,000 production software releases confirm that approximately 14.78% of all API changes introduce breaking contract changes.
- **LLM API Velocity:** Unlike legacy APIs, generative AI spec models (OpenAI, Gemini, Anthropic) update their payloads frequently. Deprecations (e.g. OpenAI v0.28 to v1.0) cause massive manual codebase rewrites.
- **40% of Failures:** Unmanaged third-party API drift is estimated to account for up to 40% of all software integration failures.

2. LEGAL ENTITY & DELAWARE INCORPORATION

We are establishing a secure corporate structure to protect all founding leads:

- **Delaware C-Corp:** We will register as a Delaware C-Corp via **Stripe Atlas / Clerky** immediately upon securing our first pre-seed commitments.
- **IP Protection:** All code and algorithms will be legally assigned to the Delaware entity under standard PIIA agreements.
- **Vesting:** All founding equity will follow a standard YC 4-year vesting plan with a 1-year cliff.
